## **NFT Designs For Sale**

Infinity is now offering its turbine and system designs as a NFT as a first in the industry to enter its develop turbine development programs as part of the Ethereum blockchain arena.

The program offered by Infinity will initially be their own products, but will rapidly expanding into a clearinghouse of any tech NFT product (development, design, equipment, CO2 credits, and more).

## NFT Technology Start-up Initiative

Infinity is currently seeking investors to start-up a technology NFT workspace (website) which allows holders of designs and technology to register, deploy, and monetize their work.

This could be complimentary to the patent system, but would provide an alternative for a fast-to-market alternative for developers allowing them to gain access to leases, royalties, reselling, renting, and other income options.

We would like to deploy the following quickly:

- start-up company as the technology handler for NFTs
- website
- Staking and blockchain algorithms including mining via Filemaker (database)
- Trading post for real equipment based on NFTs

From Ethereum: NFTs are tokens that we can use to represent ownership of unique items. They let us tokenize things like art, collectibles, even real estate. They can only have one official owner at a time and they're secured by the Ethereum blockchain – no one can modify the record of ownership or copy/paste a new NFT into existence. NFT stands for non-fungible token. Non-fungible is an economic term that you could use to describe things like your furniture, a song file, or your computer. These things are not interchangeable for other items because they have unique properties. NFTs give the ability to assign or claim ownership of any unique piece of digital data, trackable by using Ethereum's blockchain as a public ledger. An NFT is minted from digital objects as a representation of digital or non-digital assets.

## IT XR Redstone Turbine NFT For Sale

This is our first entry and product into the NFT Ethereum world.

NFT for high tech turbine design with one part 3D printed counter-rotating energy turbine. Includes all rights to this turbine design, including license for Fluid Handling Block I and II for the turbine assembly and housing.

The NFT includes the blueprints (cad/cam) and all future development of the IT XR Project Redstone.

Be part of the future with this NFT.

Can be bought and sold but only one design NFT exists. Royalties go to the developer (Infinity) to keep enhancing design and applications.

Price: \$5,000,000 per unit

Can be bought and sold: Yes

Royalty to Developer: 2.5 percent (ongoing research and development)

## IT XR Redstone Turbine

The IT XR Redstone Turbine is an experimental 6 inch diameter turbine designed for small scale power production for the home or low power applications (IT10 1-10 kW).

**Project Goals:** Integrate a liquid pump into one rotating element. Instead of a common shaft driven feedpump, make the turbine counter-rotating in one piece.

**Working Fluid:** R-245fa, R-134, Compressed Air, pressurized water, and a Stainless Steel version with CO2.

**Modular Block Assembly:** Used since 2008, our Modular Block concept (patented) has been used in hundreds of turbine prototypes and production assemblies. This version uses square blocks with 3/8 fasteners and threaded bores.

**Purpose:** Small power production without the need for a external feed pump.

**Rapid-Configuration:** This assembly allows you to quickly configure turbines and test various working fluids and heat sources. The basic design is for 300 psi or less, which is determinant on the back magnetic coupling block which is made from HDPE. If you can make from nonmagnetic metal or composite fiber for a thicker (stronger) back, then you can use flows with greater pressure.

**Magnetic Coupling:** The design has a basic 6 inch diameter magnetic coupling and follower, which allows you to have a generator or drive unit mounted exterior.

Plans and licensing available. All revenue goes to the owner of the NFT.

## Modular Block

The Project Redstone turbine uses a housing assembly from our patented Fluid Handling Device I and II. IP is protected.

## IT 10 Redstone Turbine Assembly

Turbine Flow: The goal of this project is to show that a ORC turbine can be made with one rotating part. The working fluid is introduced into the front center of the rotor, goes through a heating project using cavitation or induction magnetic heating, is further heated (if necessary) and then expanded through the outer part of the rotor.

### Functions:

1. Internal cooling via integral fluid channels.
2. Preheat via center of rotor (while heated flow is expanded).
3. Cavitation heating of liquid.
4. Induction heating of liquid.
5. Counter-rotating flow.
6. Common rotating element allows turbine to power the feed pump, cavitation, and induction heating.
7. Magnetic or legacy permeter bearings (no center shaft per se since the rotor becomes the shaft).
8. Magnetic coupling drive for shaft drive or coil generation output options.
9. Low maintenance from less parts and one rotating element.
10. Multiple channel options allow additional heating, cooling, or other functions to be performed by the rotating part and working fluid (extraction of materials in working fluid, electrostatic precipitation, spinning disc reactor functions, etc.).

## Modular Block

The Project Redstone turbine uses a housing assembly from our patented Fluid Handling Device I and II. IP is protected.
