### Image URL Description

#### Assemble Ingredients

Assemble all the ingredients. The first stage of the process is to melt the bees wax in the Rice Bran oil and Shea Butter, done with a double boiler, or faster in a microwave. Never put any metal (including the magnetic stir bar) in the microwave.

#### Measure Oil and Bees Wax

In the Mason jar or container, add measure and add the the bees wax. The bees wax is generally sold in small pellets. Less beeswax will make formula more like a liquid, while more wax will result in a creamier, then solid formula. If you are using a digital thermometer, the temperature should be around 130F.

#### Heat Mixture Until Melted

Heat up the mixture in the microwave for 30 seconds. If you are using a digital thermometer (I use a laser non contact one), the temperature will be around 130F after first 30 seconds. If the mixture is not melted, heat another 30 seconds. After the second 30 seconds, the mixture will be around 130F and the bees wax will be melted.
